FFP2 NR D MASKS

high-breathability PFE > 99%

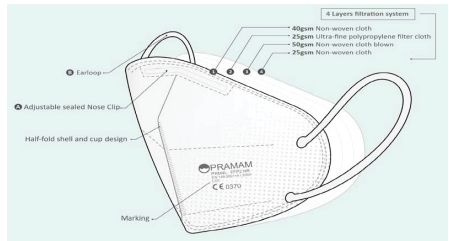

Our disposable masks, produced in Tuscany, Italy, are the highest quality EN 149 FFP2 four-ply masks available today. The raw materials are kept in a controlled environment, sterilized ply-by-ply and individually wrapped for end-user safety.

Brightside's manufacturing partner and technical team, which are composed of engineers, chemists and biologists, conceived and designed this FFP2 mask that offers maximum protection and high breathability, suitable for use by employees, food service workers, private citizens, etc., even for long periods of time.

Our new nanoparticle technopolymer makes it possible to make a mask with only 4 layers but with an Oil and NaCl particle filtration capacity of > 99% and a bacterial filtration capacity of 99.9%

A wide variety of colors are available for personal desires, or corporate uniform needs. We don't want you to get bored. Instead, we want to fill your life with color to match every mood, outfit, or brand, while still being well protected, without having to give up comfort and breathability. Our masks are tax deductible as they are registered as a medical device.
